

STAT120: Quiz 3 (9/17)

Name: _____

1. Which of the following creates a numeric vector with the values 2, 5, 8, and 11?

☐ `c(2, 5, 8, 11)`

☐ `c("2", "5", "8", "11")`

☐ `c(TRUE, FALSE, TRUE, FALSE)`

☐ `seq(2, 11, by = 3)`

2. Suppose `x <- c(3, 7, 10, 15)`. What is the output of `x[x > 7]`?

☐ `3 7 10`

☐ `10 15`

☐ `7 10 15`

☐ `15`

3. Which statement about `class()` is correct?

☐ It creates a data frame called `class`.

☐ It can be used to check the type of an object in R.

☐ It is only used for data frames.

☐ It creates a new vector.

4. What is the result of `as.numeric(c(TRUE, FALSE, TRUE))`?

☐ `1 0 1`

☐ `1`

☐ `"1" "0" "1"`

☐ An error

5. Which of the following is an example of a character vector?

☐ `c(1, 2, 3, 4)`

☐ `c(TRUE, FALSE, TRUE)`

☐ `c("A", "B", "C")`

☐ `c(1L, 2L, 3L)`

6. A factor vector, `year`, contains values such as "Senior", "Freshman", "Sophomore". A numeric vector, `gpa`, contains values such as 3.62, 3.84, 3.95. Write R code using `tapply()` to calculate the average GPA for each year.
